

## FORESTRY QUALITY OPPORTUNITIES

### Software Developer

Our forestry equipment includes advanced electronic systems for control of machines and assemblies and information processing. Systems are complex with multiple computers in collaboration over the CAN and Ethernet, as well as integration with cloud services. Now we take new steps in the evolution towards the future. We invest heavily in product development and develop both cloud solutions and embedded hardware with software to our machines.

You have some sort of degree or equivalent experience. Good knowledge of development processes, how the testing of software is done and experienced in Server Solutions, Database, Java and Web development. Knowledge of "open source" solutions, app development and an understanding of how cloud services are built up are all benefits that you will have use of in your work. You will mainly work with specification and development of our cloud services. We prefer that you have experience with SQL, programming in a Linux environment, Java, Flash / Flex and .Net.

We expect you to have good communication skills, are proactive and used to work with goals and are result-oriented. You can work both independently and with others. International contacts with associated knowledge sharing are also included as a natural part of your projects. Good language understanding is an important component.

For information please contact Peter Assarsson 090-70 95 18, e-mail: [peter.assarsson@komatsuforest.com](mailto:peter.assarsson@komatsuforest.com)

Please submit your application **no later then 25th March** by e-mail to: [humanresources@komatsuforest.com](mailto:humanresources@komatsuforest.com). Referencenumber **1203**.
